

**BLOCKCHAIN
ITALIA**

WHO WE ARE

Blockchain Italia is an Italian company focused on **fintech and blockchain** solutions.

High specialization, tangible results, multiple solutions and services in a **single point of access**.

Our mission is optimizing processes through digitalization and **disruptive** technologies.

BLOCKCHAIN
ITALIA

OUR EXPERIENCE

Dedit

Dedit is a **trust-less timestamp** service based on the public blockchain of Ethereum.

Dedit defines a set of operations for creating **provable timestamps** and later independently verifying them. Its interface allows you to interact with a smart contract on the blockchain in a simple and immediate way.

Blockchain Forum Italia is the **first exhibition in the blockchain sector** that combines the fair aspect, networking between companies, a panel of guests and high-quality speakers on a single day.

More than **30 speakers and 20 workshop** with the best experts of fintech, cryptocurrencies and blockchain sector.

OUR SERVICES

BUSINESS
CONSULTING

DESIGN AND
DEVELOPMENT

TRAINING

BUSINESS CONSULTING

When new technologies enter the market, there are often **obstacles** in terms of understanding and strategy.

Even if you are developing *in-house*, relying on professionals can be the **most effective** and simple solution.

DESIGN AND DEVELOPMENT

We deploy decentralized **applications** (dApps) and standard tokens on Ethereum's public Blockchain (also other blockchains).

We develop **smart contracts** to automate flows and design private Blockchain solutions for companies and consortia.

TRAINING

The digital transformation is **inexorably changing** production models and internal processes: staying up-to-date must be on the agenda of every company and every manager.

SMART
CONTRACT

HARDWARE AND SENSORS INTEGRATION WITH BLOCKCHAIN

Internet of Things (IoT), as sensors and hardware, can be programmed to interact with **special smart contract** and nodes.

Our mission is to find the correct applications to enhance process and to create **new opportunities**.

TOKENIZATION OF PHYSICAL ASSETS

The creation of scarce digital assets is one of the **main application** on blockchain and decentralized protocols.

Our main goal is to create **a digital representation of physical asset** to better off liquidity cross industries and to warranty a dematerialization of deeds.

NOTARIZATION OF DOCUMENTS AND FILE

Blockchain is a distributed database with a decentralized governance, and it can be used as a **trust-less and tamper-proof** calendar server.

Our mission is to find with our clients which files and documents should be saved in the blockchain **to strengthen the security** of the company.

PAYMENT AND FINANCIAL SMART CONTRACT

The creation of a decentralized payment system is the **first application** within a blockchain.

Our mission is to create the **technological infrastructure** to safely conserve, to receive and to send cryptocurrencies.
